 The Push for Price Competition, *Richard H. Stanley*, p112, April.  
 Time to Think of the Future, *Emmanuel N. Nicolaidis*, p68, February.  
 Unfinished Business, *Richard H. Stanley*, p48, May.  
 The Virginia Professional Ethics Trilogy, *Milton F. Lunch*, p28, February.  
 What Is a Fair and Reasonable Profit?, *Richard H. Stanley*, p32, January.

### Business Aspects

Budgeting for International Engineering Costs, *Robert H. Thomas*, p52, February.  
 Changing Fee Patterns Reflect Increased Costs, *Robert O. Gritschke*, p45, February.  
 The Engineer's New Role as Design Team Leader, *Michael A. Hertzberg*, p41, February.  
 OSHA... Its Impact On Design Professionals, *Arthur T. Kornblut*, p102, June.  
 Professional Liability — New Role Brings New Risks, *James R. Rush*, p48, February.  
 Salary Surveys: What They Mean to Consultants, *Jane Edmunds*, p39, January.  
 A Suggested Proposal Format for Major Process Equipment, *Richard J. Ryan*, p50, January.

### Cover

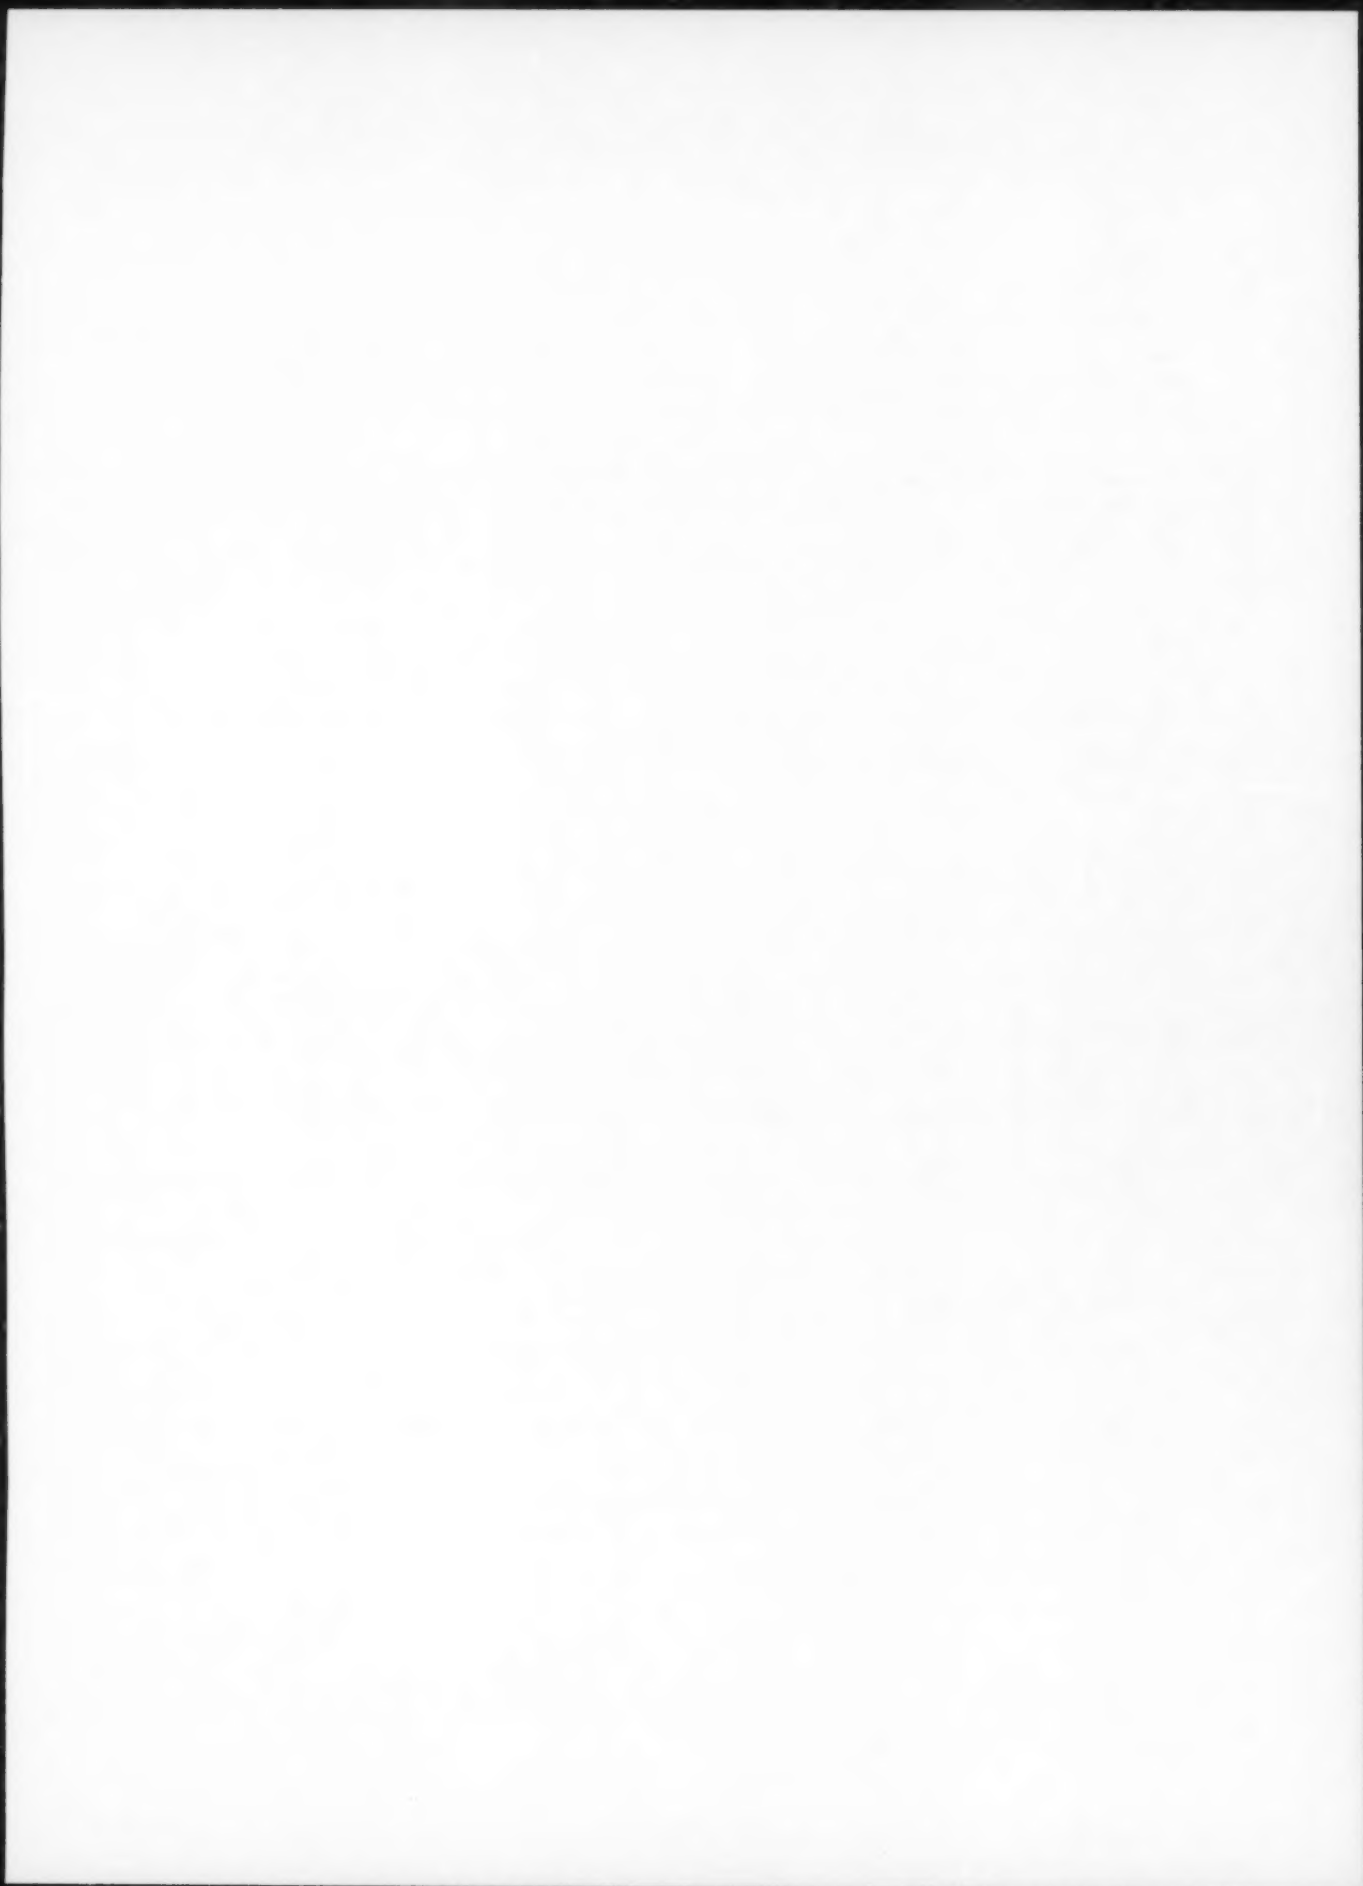

William A. Clevenger... All He Wants Is Results, *Stanley Cohen*, p77, June.

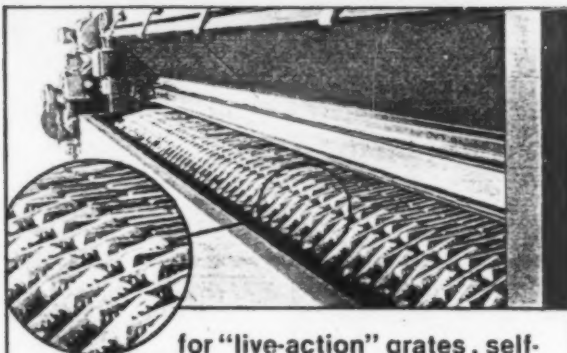

### Economics

Back to the Land, *William R. Park*, p18, June.  
 Construction's 1977 Economic Outlook, *William R. Park*, p46, January.  
 Great Thoughts on Business, *William R. Park*, p30, March.  
 The National Debt and the Cost of Construction, *William R. Park*, p10, January.  
 The Patient Economy, *William R. Park*, p76, Feb.  
 A Season to Do Business, *William R. Park*, p22, May.  
 What Has Happened to the Home Office?, *William R. Park*, p38, April.

### Engineering and Design Concepts

ACEC Engineering Excellence Awards, p72, May.  
 Applying a Systems Approach to Area-Wide Flood Control Studies, *Robert J. Buda*, p54, January.  
 Assessing Our Energy Alternatives, *R. A. Budenholzer & Zalman Lavan*, p97, May.  
 Automating the Plant for Increased Productivity, *Clifford E. Evanson & Roger W. Bolz*, p76, April.  
 A Case Study: A School Complex in Saudi Arabia, *John R. Schneider & Donald P. Claus*, p94, March.  
 "City of the Sun" Previewed in Model, *Leon Ragsdale & Roland E. Christensen*, p98, March.  
 Designing and Siting Solar Power Plants, *William J. Bradley*, p80, March.  
 The Economics of Solar Energy for Commercial Buildings, *F. H. Bridgers & R. G. Supple*, p85, March.  
 Energy Conservation Involves Both Design and Maintenance, *N. W. Dunlap, Jr.*, p70, April.  
 Getting Back to Basics for Energy Conservation, *Alfred Greenberg*, p110, May.  
 How One Design Firm Handled Conversion, *Allen T. Koster*, p86, June.  
 Implementation Issues in Resource Recovery Planning, *James M. Ramsey & Henry S. Vaccaro*, p48, January.  
 Industrial Plant Design: The CE Plays an Increasing Role, *J. R. Mayes & Arthur C. Jones, Jr.*, p53, April.  
 1977: A Crucial Year for Solar Energy, *J. D. Walton, Jr.*, p69, March.  
 No Matter What Your Measure — The Costs Will Be High, *Bradley G. Field*, p82, June.  
 Precode Design for Postcode Operation, *John C. Penafather*, p97, June.  
 The Problems of "Dual Dimensioning," *Marc S. Caspe & Nicola Scianna*, p91, June.  
 Safety Aspects of Industrial Plant Design, *Harold E. Adams*, p65, April.  
 Solar Energy: World View, *Stanley Cohen*, p104, March.  
 The Use of the Computer in the Design Office, *Charles J. Allen*, p55, February.

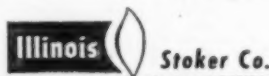

**for "live-action" grates, self-cleaning links and quickened assembly specify Illinois Chain-Grate Stokers**

"Live-Action" patented bevel-top links let air spread under 90% of fuel bed. Convert dead areas into "burn" areas. Allow low wind box pressures to keep down fly ash, reduce power requirements and cut fuel costs.

Cast-steel or cast-iron links revolve around rear drum in alternate pattern. Create a brushing action. Force complete discharge of ashes.

All stokers are shop-assembled, tested, then shipped in large modules. Reduce time and cost of field assembly.

The builders of Chain-Grate and Incinerator Stokers for 65 years invite you to send for details. Call (618) 465-7724, or write Illinois Stoker Co., Alton, Ill. 62002.

## SYSTEMS ENGINEERING PROGRAM MANAGER

**Energy conservation in communities**

Argonne National Laboratory offers an unusual opportunity to the administrative engineering professional who can manage all activities in the conceptualization and feasibility analysis of systems for providing basic energy-related services to communities.

Broad-based responsibilities include evaluating current and potential technologies for electrical generation, thermal energy storage and delivery subsystems, and waste management practices; development and application of computer-assisted methods for simulation and optimization; and planning for integrated, community-wide energy systems.

The successful candidate will possess an MS or PhD plus at least 5 years experience in designing HVAC and/or electrical systems for buildings. Also required is a senior management background appropriate to this multidisciplinary R & D program. The person who meets these requirements will command a commensurate remuneration as well as excellent benefits. Moderate travel required.

Please send detailed resume, with salary history, in confidence to: Mr. W. McFall, Argonne National Laboratory, 9700 So. Cass Avenue, Argonne, Ill. 60439.

**ARGONNE NATIONAL  
LABORATORY**

An equal opportunity employer, m/f HDCPD

Zeroing in on a New Plant Site, *David L. Lehmer & Joseph H. Dennis*, p59, April.

### Legal Aspects

Arbitration: Is It Still a Viable Approach?, *Donald R. Ostrower*, p22, January.

Contractor's Guarantee: Is One Year Enough?, *Donald R. Ostrower*, p46, March.

Is There Protection From an "Illegal" Contract?, *Donald R. Ostrower*, p44, April.

Liability to Third Parties for Economic Loss, *Donald R. Ostrower*, p72, February.

Statutes of Limitation Lack Uniformity, *Donald R. Ostrower*, p64, May.

Unexpected Subsurface Conditions: Whose Responsibility?, *Donald R. Ostrower*, p32, June.

### Management Methods

Analyzing Your Firm, *Michael R. Hough*, p74, January.

Key to Profit: Control Costs, *Michael R. Hough*, p26, April.

More on Analyzing Your Firm, *Michael R. Hough*, p16, February.

Motivating Professionals, *Michael R. Hough*, p16, May.

Profit Planning, *Michael R. Hough*, p38, March.

The Project Organization, *Michael R. Hough*, p64, June.

### Professional

AIA President Sees Change As An Opportunity for Growth, *J. M. McGinty*, p43, January.

Two Viewpoints . . . What Is Professional Independence?, *Jane Edmunds*, p62, February.

### Public Relations

## Important Features To Look For In A Pressure Regulator

- Tested with steam and/or air for dead end service.
- No change of springs for different pressures.
- Long life stainless steel springs.
- Hardened stainless steel "unit pilot valve," main valve and seat.
- Piston above flow, not affected by sediment.
- All parts renewable.
- No stuffing boxes, dash pots or weights.
- Tested and approved by U. S. Navy.

You get all of these  
features and more from ...

Types AA and AR have  
bronze bodies (300 lbs.  
steam—600 lbs. air).

Types IA and IR semi-  
steel bodies (250 lbs.  
steam—500 lbs. air).

Send b/p or specs. for quote. Re-  
quest catalog for general information.
